通过vscode远程连接实验室服务器

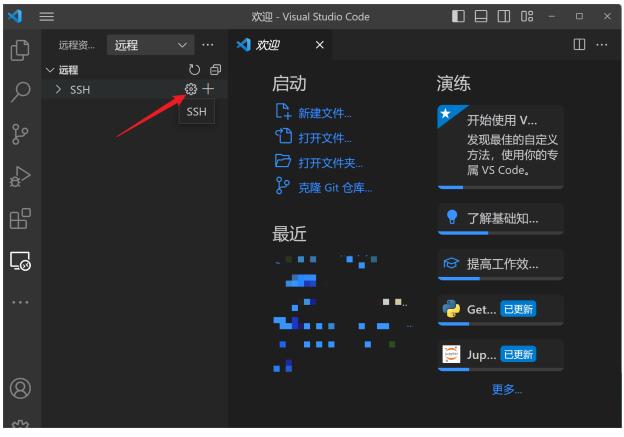

1. 下载vscode 官网链接

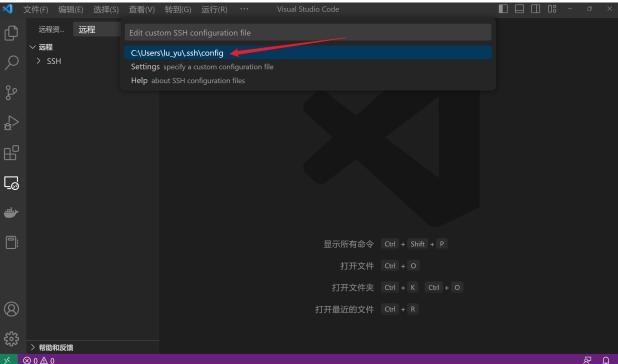

2. 安装完毕后,打开vscode,进入应用商店搜索ssh,安装Remote-SSH,安装成功后会在左侧活动栏显示 远程资源管理器(如下图步骤4所示)

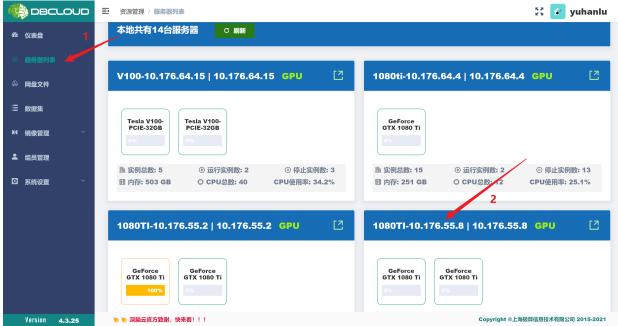

3.点击远程资源管理器图标,来到远程连接界面,点击下图中的小齿轮,进入config文件

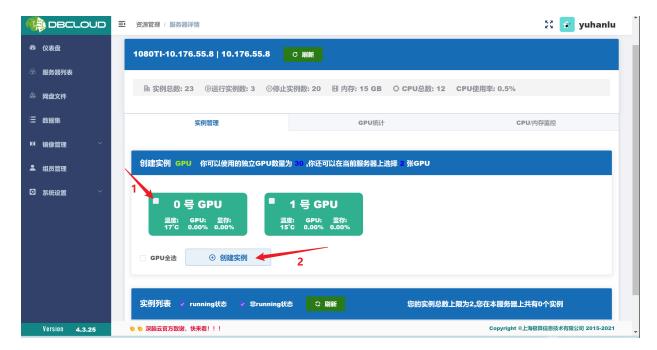

4.接下来在远端服务器上创建实例,打开浏览器登录<u>服务器网址</u>,在服务器列表中找到合适的服务器组,点击进去

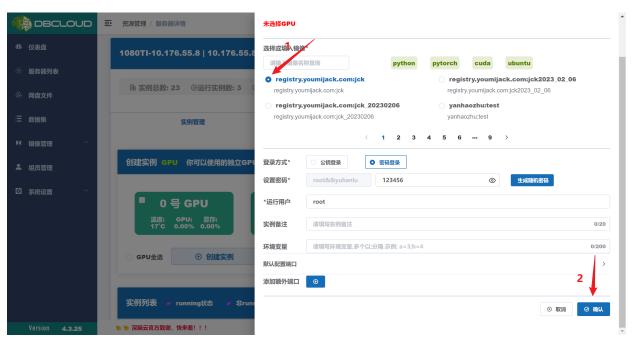

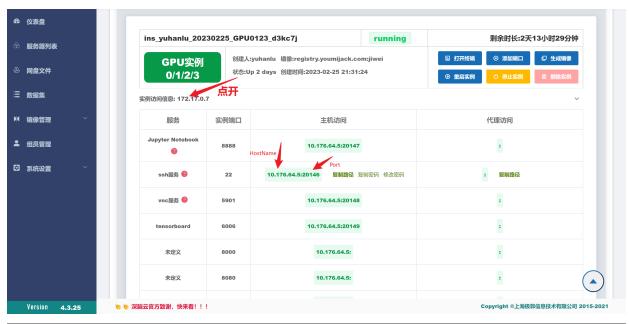

5.选择GPU后,点击创建实例

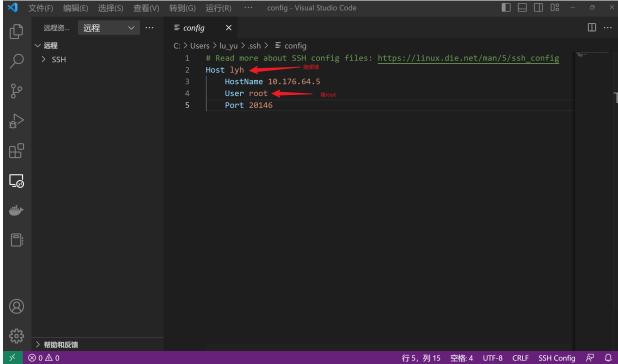

6.选择镜像后创建实例,用户名root,密码为123456

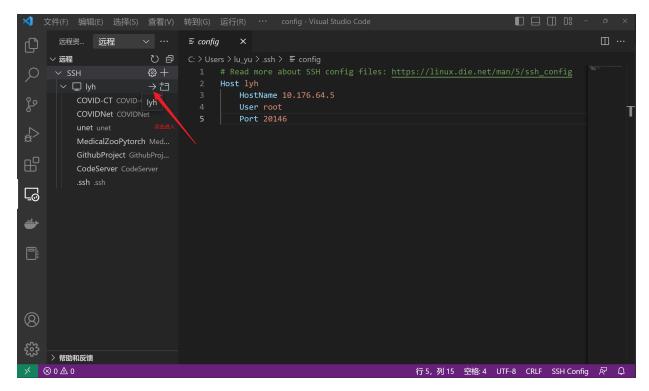

7.在config文件中填写对应配置信息后,保存config文件

8.点击进入按钮后,选择linux系统,输入用户名 (root)和密码(123456)后就可以进入服务器系统了^_^

9.设置免密登陆(和你使用GITHUB是一个套路)

先检查是否本地已经有public key,参考网址如下:

https://docs.github.com/en/authentication/connecting-to-github-with-ssh/checking-for-existing-ssh-ke
ys

如果本地电脑没有public key,则先产生public key,具体参考:

https://docs.github.com/en/authentication/connecting-to-github-with-ssh/generating-a-new-ssh-key-and-adding-it-to-the-ssh-agent?platform=mac

此时你应该在~/.ssh/id_rsa位置有了id_rsa文件,这就是你的publickey,最后在第7步的config文件里,在port下面加一行(直接复制粘贴就行):

IdentityFile ~/.ssh/id_rsa
